SUMMARY

Business and BI analyst on Puerto Rico's government ERP modernization (PeopleSoft to Oracle Fusion Cloud) and the program team's backup cloud and AI engineer. Turns fragmented production data into verified dashboards and decision-ready analysis and builds workflow automations with AI coding agents. Reconciled $3.9B in purchase orders to the cent across eight finance systems. Earlier, the report runtimes cut ~40% at e-STEPS and moved 50+ field crews off paper timesheets at HOD Investment. Bilingual English/Spanish.

EXPERIENCE

Business & BI Analyst / Incident Coordinator Jul 2026 - Present
Alpha Omega Media, LLC | Puerto Rico · Hybrid

Technology consulting firm leading technical architecture, stabilization, and reporting workstreams for the Government of Puerto Rico's ERP modernization, a PeopleSoft to Oracle Fusion Cloud migration spanning Finance, Supply Chain, and Procurement across dozens of agencies.

- Served as the program team's backup cloud and AI engineer; built automation with AI coding agents that pulls Clockify API time data and generates the team's standardized weekly status reports, eliminating a manual weekly reporting step.
- Consolidated 8 production data extracts (~240,000 rows, 40 tabs) from multiple government finance systems into the first unified procure-to-pay analytics view, a 10-view application covering ~8,800 suppliers across 60 agencies.
- Verified every headline figure to the cent against source systems, including $3.9B in purchase orders, $1.89B in pending obligations, $1.2B paid to suppliers, $396.7M in invoices, and $3.04B in purchasing agreements across 113,000+ contracts.
- Mapped the end-to-end procure-to-pay process and identified control and data-quality gaps the government's own reporting had missed: under 0.2% of ~52,800 purchase orders traced to a requisition, an invoice-holds report matching zero of 3,337 supplier IDs, and ~3,000 duplicate supplier IDs in a 376,000-row master file.
- Isolated $3,485,675.41 in open obligations across 184 line items by parsing a legacy purchase-order extract and tracing the fund's owning agency to the fiscal circular that established it, unblocking stalled analysis; separately found that two agencies held 57% of all pending government payment obligations, a concentration used to prioritize cash-flow risk.
- Contributed requirements for the Treasury and Budget Office's cloud financial reporting platform (ETL from Oracle Fusion Cloud into a data warehouse and dashboards), specifying accounts-payable aging, budget-vs-actual, and federal-fund reports, and wrote the bilingual user guide for non-technical finance staff.
- Assisted on delivery engineering for a client without reliable internet: compressed a 24.5MB dataset into a 5.46MB self-contained file with zero external dependencies, helped diagnose a production hang caused by a hidden CDN dependency, and re-verified the fix offline against an automated functional test suite.
- Client-facing contact for the Director of Public Finance; delivered dashboards used by a Sub-Secretary of the Government of Puerto Rico and secured access to four Oracle Fusion Cloud modules (Payables, Procurement, Budgetary Control, General Ledger) by tying each request to a specific business question.
- Audited a $5.3M public Wi-Fi contract across 27 sites in 9 municipalities against manufacturer datasheets, isolating the one genuine contractual downgrade among ~12 vendor equipment substitutions; delivered bilingual, risk-rated audit reports to program leadership.

Software Development Intern Feb 2025 - Aug 2025
e-STEPS LLC | Guaynabo, PR

- Cut production report runtimes ~40% by refactoring SQL with indexing strategies, optimized join paths, and date-scoped filtering.
- Shipped a real-time analytics dashboard leadership uses for performance, revenue, and pipeline reviews, owning the stack from SQL query layer and REST endpoints through frontend visualization.
- Engineered dynamic JavaScript validation that blocked malformed data at entry, cutting downstream database errors and manual cleanup.

Operations Technology Developer Jun 2025 - Aug 2025
HOD Investment LLC | Moca, PR

- Co-developed a Microsoft Power Apps timekeeping tool now used by 50+ field employees, replacing paper timesheets company-wide with same-week adoption across job sites through hands-on training and change management.
- Cut payroll processing from 2+ days to instant by routing field timestamps into Power BI dashboards and payroll workflows.

EDUCATION

The Pennsylvania State University Aug 2023 - May 2027
Bachelor of Science Enterprise Technology Integration · **GPA: 3.21/4.00**
Relevant coursework: Advanced Enterprise Integration, Enterprise Information Management and Storage Architecture, Organization of Data, Development and Documentation of Enterprise Web, IT Project Management
Business Fundamentals Certificate (in progress)

- Dean's List (multiple semesters)

SKILLS

AI & Automation: AI coding agents (Claude Code, Claude API), prompt design, AI workflow automation, API integrations, and testing and verification of AI-generated code in Python and JavaScript

Cloud & Enterprise Platforms: Oracle Fusion Cloud ERP (Payables, Procurement, Budgetary Control, General Ledger), Microsoft Azure Power Platform, Power Apps, AWS, Google Cloud (Firebase), Vercel

Data & BI: SQL (query optimization, indexing, joins), Power BI, Excel, ETL workflows, data warehouse reporting requirements, dashboard development, large-scale data reconciliation

Development: JavaScript, Java, React, Vite, Node.js, HTML/CSS, REST APIs, Git/GitHub

Consulting & Delivery: Current-state process mapping, gap analysis, requirements gathering, testing, change management, user training, executive stakeholder communication, Agile, bilingual English/Spanish documentation

FEATURED PROJECTS

AI-Built Automation Tools Ongoing
Directed and tested tools built with AI coding agents for real users: a contract-generation automation for a billboard permitting practice that replaced one-by-one manual drafting, and a Quizlet-style study app used by medical students.

Crowd Meter Feb 2026 - Apr 2026
Team campus occupancy app; led the multi-layer class architecture spanning facility types, sensor inputs, user roles, prediction models, and a real-time dashboard.

Dwello Nov 2025 - Dec 2025
Solo-built React/Firebase property management platform automating rent, expense, cashflow, and ROI tracking, with AI assistants for portfolio analysis.

Tradeucate Oct 2025 - Jan 2026
Solo-built React/Firebase learning platform for trading, finance, and real estate, with real-time market data APIs and AI strategy bots that analyze user decisions.

CERTIFICATIONS IN PROGRESS

CompTIA Security+ (SY0-701) · ITIL Foundation

LEADERSHIP & SERVICE

- Phi Eta Mu Fraternity, Beta Chapter, active member of a century-old leadership development organization in Puerto Rico.
- Disaster Relief Volunteer, Puerto Rico, contributed materials and food for hurricane and earthquake recovery efforts.
